INSIGHT REPORTS

Data made easy, saving time and money

DATA YOU CAN DIGEST

Get to know your machines with a comprehensive portfolio of reports, designed to help you take action and boost the profitability of your business. Powered by CareTrack® telematics system, Insight Reports is comprised of three separate reports – each providing an easy-to-digest overview of your machine's performance.

Why choose Insight Reports?

Save time and money

Data overload is an inevitable part of telematics adoption. You can either spend hours analyzing the mountains of data produced, or off-load it onto us. Our dynamic system automatically compiles data into ready-made reports. No more need to sift through complicated data. Clear and comprehensive, the reports help break data down to size – saving you time and money.

Actionable insights

Be better equipped to evaluate your fleet's performance. With insights into the health, efficiency and productivity of your machines, the reports help make informed decisions and identify ways to reduce operating costs.

What report is right for me?

Whatever your need, we have a portfolio of reports to choose from. Our reports come in different versions and can be adapted to suit your company's structure.

Quick overview

Get a snapshot of key information related to the health, efficiency and productivity of your machines. The *Summary Report* scans through all available data and highlights areas that require your attention. The overview opens a window of opportunity for you to refine existing operating practices, or even inspire new ways of working, to generate more productivity, while saving fuel costs.

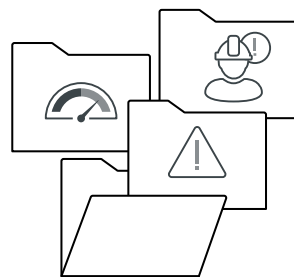

Identify actions that can impact profitability with data relating to your machine's hours and idling times, volume of material moved, fuel consumption, CO2 emissions, as well as technical alarms and operating behavior alerts.

Should you require more details, consider our selection of dedicated reports.

Reduce unplanned downtime

Keep your machine in top shape. *Health Report* helps you detect unwanted machine conditions and operating behaviors, and prompts what corrective actions need to be implemented to reduce unnecessary strain.

Act fast to reverse issues by analyzing the technical alarms and operating behavior alerts - and say goodbye to unplanned machine downtime.

Increase efficiency

Identify any inefficiency with *Fuel Efficiency Report*, structured to help you reduce the industry's number one operating cost: fuel. Armed with knowledge and clear insights into your fleet, site or individual machine, the report makes it easy for you to take the necessary steps to improve efficiency.

Find out if your machines are idling too much or causing unnecessary fuel expenses. You can make sure you're on track to meet your objectives. Simply customize the report with up to eight objectives of your choice. You can also include the price you're paying for a liter of fuel to predict potential costs and savings.

How does it work?

- You, together with your dealer, set the structure of the reports according to your organization's framework and specific areas of interest.
- Machine data points are captured via CareTrack®.
- Reports are automatically compiled in an easy-to-read pdf file and sent to your inbox on a regular basis: weekly for detailed reports and monthly for an overview.

More to offer

You're clear on the benefits, but need some guidance putting ideas into practice? Get support from your local Volvo dealer to develop a plan to increase performance. Go even further - you can request advice on the best training methods to avoid instances of machine misuse.
